

CASE ID

ARCH

☐ Max ☐ Mand ☐ Both

SURGERY TYPE

☐ Guided ☐ Freehand ☐ Hybrid

PROVISIONAL PLAN

☐ Immediate ☐ Early ☐ Delayed

THE RECORDS WE NEED TO KEEP YOUR CASE MOVING

- ☐ **Implant system** — sets the right components and digital-library mapping
- ☐ **Scan-body brand + reference number** — identifies the exact geometry that transfers implant position
- ☐ **Soft-tissue capture** — drives emergence profile and cleansability
- ☐ **Bite records** — hold the jaw relationship and cut occlusal redesign
- ☐ **Opposing records** — needed for clearance and occlusal coordination
- ☐ **Vertical dimension reference** — keeps VDO from shifting between phases
- ☐ **Smile line** — guides the transition zone and how much shows
- ☐ **Midline reference** — keeps facial alignment consistent
- ☐ **Occlusal scheme** — matches design to intended function and load
- ☐ **Provisional reference** — lets us copy and refine from something already validated

A predictable full-arch result rarely comes from one good appointment. It comes from solid records, clear intent, and clean handoffs. When the setup, imaging, components, and provisional feedback all line up, the final gets easier to make and easier to defend. Our job at Burbank Dental Lab is to help you hold that thread, so complex cases move with fewer interruptions and fewer remakes.
